

TRAVEL AGAIN AFTER CORONAVIRUS

ParkinGO[®] safe SAFETY PROTOCOL
FOR CUSTOMERS' SECURITY

CUSTOMER SECURITY GUIDELINES

ParkinGO[®] safe Protocol

1. Cleaning and disinfection of spaces
2. PPE (ffp2 masks) for all ParkinGO staff
3. Sanification points (by FreeHands)
4. Shuttle buses with pvc glass protection screens
5. Vehicle Sanitization and Disinfection (by Immunocar)

IN PARTNERSHIP WITH:

IMMUNOCAR[®]

FreeHands

1 - Cleaning and disinfection of spaces

- In order to thoroughly sanitize public spaces we use **aerosol fogging products**, which have been **expressly designed for this purpose**.

The cleaning of spaces and **high-touch surfaces** (ex. doors, handles, windows, glass, desks, light switches, toilets, taps, sinks, desks, chairs, keys, keyboards, remote controls, printers etc.) is performed **daily**.

We use microfiber cloths moistened with soap and water or with 75% ethyl alcohol and subsequently apply a sodium hypochlorite solution diluted with 0.5% of active chlorine (i.e. bleach) for toilets and other surfaces.

2 - Personal Protective Equipment

The use of face protection masks and other protective equipment (such as disposable gloves), that comply with the provisions of the scientific and health authorities, **is strictly mandatory for all the ParkinGO office and parking staff.**

Customers are advised to wear the face protection even where not imposed by the regional or national authorities.

3 - Sanification points

All the ParkinGO facilities are equipped with touchless hand sanitizer dispensers containing **Germ Protection 70% Isopropyl Alcohol Sanitizing Gel** available to all customers **at reception and shuttle bus areas.**

The sanification points are produced and distributed by **FREEHANDS**, a company specialized in industrial sanitization and cleaning.

In case of necessity, the customers can also use **free disposable PVC or PE gloves** available upon request.

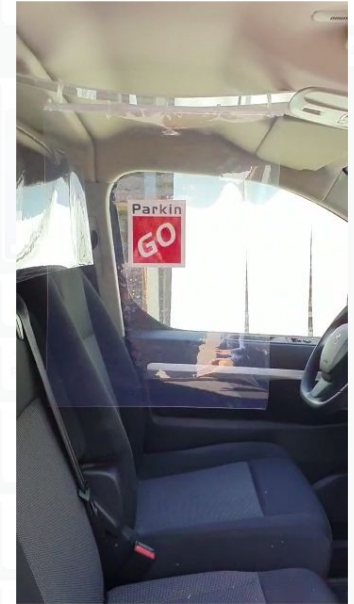

4 - Shuttle bus protection measures

We have designed an in-car **protective system in PVC glass, which allows separation of every single passenger.**

This material guarantees physical and microbiological safety of customers thanks to its' extreme flexibility upon vehicle braking.

The screens prevent direct physical contact with the driver and other passengers.

All ParkinGO **shuttle buses** are **sanitized after each trip** to and from the airport.

5 - Vehicle sanitization and disinfection

All the **high-touch surfaces of the vehicle** (handles, steering wheel, dashboard, control panel, gearbox and the trunk) **are disinfected** before the car is returned to its owner.

The sanitization service is carried out in collaboration with **IMMUNOCAR**, a company specialized in **sanitization and disinfection of vehicle fleets**.
